

GSM:SAVE □

Fixed Cellular Terminals

ATEUS® -

ISDN 2

**Fixed Cellular
Terminal**

*The digital gateway to GSM
networks*

The 2n ISDN Unit offers :

- **Intelligent SIM Management ensures optimum cost savings by distributing calls between both channels dependant upon the type and volume of sims installed**
- **The optional dial-through technology means that there is no need to have spare ports available on your PBX and no requirement for PBX configuration to be changed**
- **The dial-through version has 4 x ISDN 2 interfaces (2 x NT, 2 x TE) which means that all calls to mobiles are captured across connected lines**
- **True SIM Management enables Sims to be dynamically turned off when the minutes on the tariff are reached**

Are you looking for a way to save money when calling mobile numbers from your business land line telephones? Wouldn't it be great to spend as much time as you need making calls to mobiles without having to worry about huge bills? The ATEUS® Fixed Cellular Terminal (FCT) range from GSMSAVE can make this a reality by providing a flexible and cost efficient connection between telephone systems and GSM mobile networks.

By routing calls to mobile numbers which are made from your PBX via the GSM network, the PSTN network is totally bypassed. Voice and data traffic can all be routed in this way – and you can also browse the Internet or send and receive e-mails and faxes from your PC through a GPRS or CSD data connection. And by adding the ATEUS® SMS application all LAN users within your organisation can send and receive SMS messages directly from the desktop.

GSM:SAVE - Fixed Cellular Terminals
